

VISIBLE DIFFERENCE
WORKWEAR

WORKWEAR

CONTENTS

Visible Difference is a NZ owned & operated brand specialising in Workwear Apparel.

We have developed a technical range of products to specifically suit the requirements of a hard working New Zealand environment, offering a simplistic purchasing system with customer service second to none.

Workwear garments made from 100% cotton drill, 100% Polyester and 'pre-shrunk' fabrics have passed rigorous tests to ensure they meet high standards of design and quality, incorporating modern styling and a high level of comfort.

Standard features of Visible Difference Workwear include bar-tacked stress points for additional strength, mesh venting for breathability, twin or triple stitched seams, high quality buttons and zips for lasting durability and the best materials including 3M reflective tape.

Specialised products and customization in low order minimums is what makes Visible Difference unique.

DISCLAIMER: The colours in this brochure are representative of the garments only and not true to actual garment colours. The performance criteria of all high visibility product in the Visible Difference brochure is tested at time of manufacturing in accordance with set standards, but can diminish with time, UV exposure, general soiling, misuse or failure to follow the specified washing instructions contained within each garment.

SPECIFICATIONS & GARMENT CARE

GARMENT CARE

The performance criteria of all Visible Difference high visibility products has been tested at time of manufacturing in accordance with set standards, but can diminish with time, UV exposure, misuse or failure to follow the specified washing instructions.

To ensure the best performance from your Workwear, please follow the care instructions inside each garment.

As a general guide:

Cold/Warm machine wash
Wash inside out
Drip dry when possible
Do not bleach
Only iron if specified
Avoid chemical contact

 **3M**
Visible Difference Workwear uses 3M brand reflective tape on our taped garments, in accordance with AS/NZS 1906.4.

 **UPF50+**
Garments carrying this icon have the highest level of UV protection.

 **BREATHABLE**
Hi Vis Garments that carry this icon are breathable.

 **QUICK DRY**
Garments carrying this icon will dry quickly after washing or heavy perspiration.

 **VENTING SYSTEM**
These garments have a purpose built venting system to keep you cool.

 **WATERPROOF**
Garments that carry this icon are waterproof.

 **DAY**
Garments carrying this icon provide the wearer with high visibility for use in daylight conditions only and comply with relevant Aus/NZ standards.

 **DAY / NIGHT**
Garments carrying this icon provide the wearer with high visibility for use in all light conditions including day and night use and comply with relevant Aus/NZ standards.

 **FLUORO**
Garments carrying this icon are manufactured from specially developed fluorescent materials and comply with relevant Aus/NZ standards for chromaticity.

 **REFLECTIVE**
Garments carrying this icon are manufactured to include 3M reflective tape and comply with relevant Aus/NZ standards for reflectivity.

What is the difference?

Extreme fabric construction allows for high breathability. Cotton and polycotton fabric colour retention cannot compare to mini mesh polyester retention.

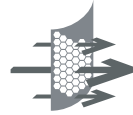

Mini-mesh Microfibre

Standard Polyester

MINI-MESH MICROFIBRE

Microfibre Mini Mesh vs Micromesh

Micromesh describes the structure or the actual surface look of the fabric.

Microfibre describes the yarn the fabric is knitted from. Microfibre's are densely packed filaments that are contained within a hollow outer fibre and these fibres produce a fabric with maximum softness and comfort along with superior breathability, quick drying time and excellent wash and wear properties.

Many high visibility shirts are made from a similar look but lesser quality micromesh, generally using standard or core-spun Polyester.

Visible Difference garments are made from true 144 filament Polyester Microfibre fabric giving outstanding performance with the excellent soft touch feel.

Cotton Drill

Visible Difference Cotton Drill is a "pre-shrunk" durable fabric with a strong diagonal structure in the weave to meet high standards of quality including stability, UV protection, abrasion resistance, colour fastness and tear resistance.

The natural characteristics of cotton drill create comfortable, hard wearing garments perfect for our climate and tough environment.

Polar Fleece

Polar fleece is a lightweight, soft and easy care, insulating fabric made from Polyester; it has a brushed finish on both sides making it warm and comfortable against the body.

Polar fleece is lightweight, highly breathable, soft and easy care, can be machine washed and dries quickly.

It is ideal for strenuous physical activity as perspiration is able to readily pass through the fabric while still keeping the wearer warm.

Brushing

Brushing is the general term for a soft knitted fabric with a deep pile on one side.

It is similar to Polar Fleece, however only one side is soft and brushed and the other side is flat and more durable.

Polyester Oxford

Oxford fabric has a similar construction to canvas and is a heavy duty plain woven fabric.

Denier (D) is a unit of measure for the linear mass density of fibres. The 300D Oxford used by Visible Difference gives a superior quality of fabric and combined with the PU (Polyurethane) coating makes a softer, more comfortable wet weather garment that is hard wearing and tough.

SIZE GUIDE

Neck

Measure around your neck allowing for two fingers behind the tape.

Chest

Run tape around fullest part of chest and under arms ensuring a firm measurement. Ensure that tape is level at the back when taking the measurement.

Waist

This measurement is taken over the waistband of your current trouser allowing for comfortable fit.
